1. Introduction

This report consolidates the Enterprise Risk Management (ERM) analysis developed throughout course ALY 6130, applied to the case of Shopify Inc. and its acquisition of Vantage Discovery, an artificial intelligence-powered search startup, completed in March 2025. The objective of this report is to integrate the qualitative and quantitative findings obtained across the previous stages of the analysis, from the initial SWOT to the Monte Carlo simulation, into an executive framework oriented toward decision-making.

The acquisition of Vantage Discovery represents a significant strategic bet for Shopify: integrating Large Language Model (LLM)-based search technology into its platform places the company in direct competition with technology giants such as Amazon and Google, which have spent years investing in similar capabilities. At the same time, this acquisition opens a short-term opportunity window to capture merchants dissatisfied with the restrictions and fees imposed by platforms dominated by their direct competition.

This report presents the three critical risks identified, two negative and one positive, along with their Key Risk Indicators (KRIs), escalation thresholds, Monte Carlo simulation results, and the updated Risk Treatment and Response Plan, with the purpose of providing decision-makers with a proactive evaluation based on quantitative evidence and aligned with industry standards.

2. SWOT Analysis

The following SWOT matrix presents an Enterprise Risk Management perspective on Shopify's acquisition of Vantage Discovery, identifying the internal and external factors that define the company's risk landscape during the integration process.

Table 1. SWOT Analysis Matrix: Shopify's Acquisition of Vantage Discovery (ERM Perspective)

Strengths S1: Strategic acquisition of high-level AI talent. Shopify strengthened its AI capabilities by acquiring startups such as Vantage Discovery, which brings specialized talent and expertise, supporting innovation and future development. S2: Strong market position and brand recognition in e-commerce. Shopify has a well-established presence and reputation in the online commerce industry, supported by a large customer ecosystem. S3: Large-scale and well-developed platform infrastructure. Shopify operates a robust, scalable platform that supports technological growth and AI integration.	Weaknesses W1: High integration risk due to multiple AI startup acquisitions. Shopify completed several AI-related acquisitions, including six in a relatively short period. This rapid expansion may increase technological fragmentation, create cultural integration challenges, and increase operational complexity across teams and systems. W2: Dependence on external AI model providers and technologies. Shopify's AI capabilities may rely on external LLM providers and technologies. Changes in pricing, service availability, or provider policies could create operational and strategic risks. W3: Potential employee uncertainty and talent retention challenges due to AI-first organizational policies. Shopify's recent AI-focused direction, including leadership expectations that emphasize AI adoption, may create uncertainty among employees and increase the challenge of retaining specialized talent during periods of organizational change.
Opportunities O1: Increased sales growth driven by AI and agentic commerce capabilities. AI-powered tools and agentic commerce may improve the customer experience, increase personalization, and drive higher sales. O2: New strategic partnerships and innovation opportunities through AI acquisitions. Recent AI acquisitions may create opportunities for collaboration, technological expansion, and development of new services. O3: Access to new merchants through an open and flexible platform ecosystem. Shopify's platform model may attract new sellers looking for alternatives with greater flexibility and independence compared to larger digital ecosystems	Threats T1: High competition in the AI-driven market with major industry players such as Amazon and Google. Shopify operates in an increasingly competitive environment where large technology companies continue to invest heavily in AI capabilities and intelligent commerce solutions, positioning it in a competitive landscape it has not traditionally operated in. T2: Cybersecurity and data privacy risks associated with AI integration. The integration of AI-powered search technologies, such as Vantage Discovery, may create new attack vectors and increase exposure of customer and behavioral data, thereby increasing cybersecurity and privacy risks. T3: Regulatory policy and ethical risks associated with AI adoption. Increasing regulations and ethical concerns related to AI and data usage, such as the EU AI Act and Canada's PIPEDA, may create compliance challenges and increase operational costs.

The SWOT analysis reveals a risk profile characterized by strong internal foundations offset by significant integration and competitive pressures. Shopify enters this acquisition with clear structural advantages, established infrastructure, brand recognition, and newly acquired AI talent, but faces external threats from technically superior competitors and an increasingly complex regulatory environment. The opportunities identified, particularly O1 and O3, are time-sensitive: their realization depends directly on the speed and quality of the Vantage Discovery integration. From an ERM perspective, the threat quadrant places Shopify in a competitive environment it has not previously experienced at this scale, making the risks identified in this analysis both urgent and strategically consequential.

3. Risk Register

Building on the SWOT analysis, three critical risks were identified for Shopify's acquisition of Vantage Discovery: two negative risks in the threat quadrant and one positive risk in the opportunity quadrant. The inclusion of a positive risk reflects a comprehensive ERM approach, one that recognizes that under-exploiting a strategic opportunity carries its own financial consequences. Each risk was assessed using a Likelihood $\times$ Impact scoring methodology, with scores ranging from 1 to 5 on each dimension.

Table 2. Risk Register: Shopify's Acquisition of Vantage Discovery

Risk #	Date	The Risk of/That	Caused by	Resulting In	Consequence/Impact	Likelihood Score	Impact Score	Risk Score	Priority (H, M, L)	Mitigation	Risk Owner	Open/Closed
1	June 1, 2026	Loss of active merchants to competitors with more established AI search capabilities.	Potentially slow or incomplete integration of Vantage Discovery into Shopify's platform.	Migration of merchants away from Shopify's platform toward competitors with already-integrated AI search solutions.	<u>Financial</u> : Revenue loss due to reduced merchant activity and online sales. <u>Operational</u> : Increased workload and resource strain on the integration team, potentially delaying timelines. <u>Reputational</u> : Shopify is perceived as lacking the capacity to successfully execute this integration.	3	4	12	H	1. Conduct an internal audit prior to integration to assess the pre-integration landscape. 2. Implement a phased integration approach. 3. Establish a continuous monitoring process.	Chief Technology Officer / Integration Team	Open
2	June 1, 2026	Regulatory non-compliance with PIPEDA, the EU AI Act, and other emerging AI regulations due to the integration of LLM-based search technology.	Shopify's use of Large Language Models (LLMs) and customer behavioral data through Vantage Discovery may create privacy, transparency, consent, and algorithmic governance challenges across multiple jurisdictions.	Regulatory investigations, compliance findings, legal actions, operational disruption, and increased compliance costs associated with remediation activities.	<u>Financial</u> : Regulatory fines, legal expenses, and increased compliance costs. <u>Strategic</u> : Reduced merchant and customer trust in Shopify's AI capabilities. <u>Operational</u> : Delays in AI deployment due to corrective actions and regulatory reviews. <u>Reputational</u> : Negative publicity resulting from privacy or AI governance violations.	3	5	15	High	1. Establish an AI Governance Committee responsible for oversight of all AI-enabled solutions. 2. Conduct quarterly privacy impact assessments and AI compliance reviews. 3. Implement data minimization, consent management, and model transparency controls. 4. Maintain legal monitoring of emerging regulations including PIPEDA, AIDA, GDPR, and the EU AI Act.	Chief Compliance Officer / Legal & Compliance Team	Open
3	June 1, 2026	Accelerated expansion into new merchant segments through contextual AI search, driven by growing demand for AI-powered commerce tools and Shopify's open platform ecosystem advantage	Rising merchant demand for personalized, context-aware AI search capabilities (O1: increased sales growth driven by AI and agentic commerce) combined with Shopify's open and flexible platform model attracting merchants seeking independence from restrictive larger ecosystems such as Amazon Marketplace (O3), with Vantage Discovery's LLM technology providing a differentiated capability that smaller competitors cannot yet replicate	Accelerated net new merchant acquisition across SMB and mid-market e-commerce segments, increased average revenue per merchant through AI-driven upsell opportunities, and strengthened network effects from a larger and more diverse merchant base, amplifying the long-term return on the Vantage Discovery acquisition investment	<u>Financial</u> : Incremental ARR growth of 3–6% if new merchant segment opportunity is actively captured during the integration window. <u>Strategic</u> : Permanent market share gains with strong AI-feature switching-cost lock-in, reducing future churn risk once merchants build workflows around Shopify's contextual search capabilities. <u>Operational</u> : Onboarding resource strain if merchant acquisition volume exceeds current support infrastructure capacity, requiring proactive scaling. <u>Brand</u> : Successful AI-driven merchant growth reinforces Shopify's positioning as the leading AI-first commerce platform (BetaKit, 2025).	3	4	12	High	1. Launch dedicated AI-powered merchant acquisition campaign targeting merchants on restrictive platforms (Amazon Seller Central, Wix). 2. Develop contextual AI search case studies to demonstrate ROI to prospective merchants. 3. Offer time-limited migration incentives (waived fees, extended trials) to capture window. 4. Scale onboarding team capacity proactively before campaign launch to avoid service degradation during volume surges.	Chief Revenue Officer / Growth Marketing Team	Open

Note. Risk scores calculated as Likelihood Score $\times$ Impact Score. H = High priority; M = Medium priority; L = Low priority.

The Risk Register establishes Risk 2, Regulatory Non-Compliance, as the highest-priority threat, with a score of 15, driven by its maximum impact rating of 5 given the potential for multi-

jurisdictional regulatory fines. Risk 1 and Risk 3 share the same score of 12, indicating a moderate likelihood and significant financial exposure in both cases. Notably, Risk 3 is classified as a positive risk: failure to capitalize on the AI-First merchant acquisition window within the 6 to 18-month integration period represents a measurable opportunity cost that demands the same management discipline as the negative risks.

4. Key Risk Indicators (KRIs)

Key Risk Indicators (KRIs) enable continuous, proactive monitoring of risks identified in the SWOT analysis and the Risk Register. For each critical operational dimension, people, processes, technology, information security, and finance, a measurable indicator was defined with an alert threshold that signals when a risk is escalating before it causes a significant impact.

Table 3. Key Risk Indicators (KRIs) for Vantage Discovery Acquisition

Dimension	Key Risk Indicator (KRI)	Risk Threshold / Signal	Related SWOT factor
People	Employee turnover rate, Vantage Discovery team post-acquisition	> 15% within 12 months	W3, S1
People	Integration team workload utilization	> 90% sustained over 60 days	W1
Processes	Post-merger process duplication and redundancy rate	> 20% redundant workflows	W1, O2
Processes	Regulatory and compliance audit findings	Any critical or high-severity finding	T3
Technology	AI/LLM system integration error rate	> 5% transaction or query failures	W2, T2
Technology	Platform latency increases post-integration	> 15% above baseline	S3, W1
Technology Information Security /	Cybersecurity incident frequency during integration	Any confirmed breach or intrusion attempt	T2
Technology Information Security /	Data migration accuracy rate	< 99.5% accuracy threshold	W1, T2
Financial	Acquisition integration cost overrun percentage	> 10% of projected budget	W1
Market	Merchant satisfaction score changes post-integration	> 5% decline within 6 months	O1, O3, S2, T1
Information Security	Unauthorized access attempts to merged data systems	Any confirmed unauthorized access	T2
Information Security	Third-party vendor security compliance rate	< 100% compliance with security standards	W2, T3

The table reveals that the Technology and Information Security dimensions contain the most indicators, reflecting the technical nature of the Vantage Discovery integration and the inherent exposure that comes with incorporating LLM technology into Shopify's platform. Indicators such as the AI/LLM system error rate, cybersecurity incident frequency, and third-party vendor security compliance rate are directly linked to threats T2 and T3 identified in the SWOT. Meanwhile, people indicators, particularly the Vantage Discovery team turnover rate, serve as early warning signals of the specialized talent retention risk that is critical to the success of the integration. Taken together, these KRIs provide the early warning system necessary for management to intervene in a timely manner and prevent the identified risks from materializing into financial or reputational losses.

5. Risk Heat Map

To broaden the risk assessment beyond the three primary risks identified in the Risk Register, a comprehensive evaluation of 24 risk scenarios was conducted across six categories: Financial, Operational, Competitive, Reputational, Technical, and Legal/Compliance. Each risk was scored using a Likelihood $\times$ Impact methodology, generating composite scores that determine its classification as Low Risk (<10), Moderate Risk (10–20), or High Risk (>20).

Table 4. Risk Register: 24-Risk Assessment Matrix

Risk #	The Risk of/That	Likelihood Score	Impact Score	Risk Category
R1	Minor overspend on integration tools (<1% of project budget).	9	1	Financial
R2	Minor workflow friction from AI tool adoption among support staff.	9	1	Operational
R3	Negligible feature gap vs. very small niche competitors.	7	1	Competitive Risks
R4	Isolated negative social media mentions; no mainstream coverage.	7	1	Reputational
R5	Minor UI/UX inconsistencies in AI search results display.	7	1	Technical
R6	Minor procedural documentation gap; self-identified and closed.	9	1	Legal / Compliance
R7	Unexpected integration costs exceeding project budget by 5–10%.	7	2	Financial
R8	Employee resistance to AI culture change; delayed integration milestones.	7	2	Operational
R9	Loss of small/mid-size merchants to WooCommerce or BigCommerce.	5	2	Competitive Risks
R10	Merchant NPS score declines measurably following AI search launch.	7	2	Reputational
R11	Partial AI model underperformance in non-English language markets.	9	2	Technical
R12	Regulatory inquiry from OPC (Canada) regarding LLM data processing.	5	2	Legal / Compliance
R13	Reduced merchant transaction volume; technology obsolescence risk within 3 years.	3	3	Financial
R14	Cybersecurity incident during integration; partial merchant data exposed.	7	3	Operational
R15	Amazon/Google AI search dominance reduces Shopify Plus merchant retention.	7	3	Competitive Risks
R16	Negative analyst report and public system failure during peak retail season.	5	3	Reputational
R17	AI search integration failure degrading merchant storefront experience at scale.	5	3	Technical
R18	GDPR enforcement action in EU market; formal fine issued.	3	3	Legal / Compliance
R19	Revenue miss >15% against analyst consensus; stock price decline >20%.	5	4	Financial
R20	Sustained platform downtime >8 hours affecting all global merchant storefronts.	3	4	Operational
R21	Mass merchant exodus to Amazon ecosystem following platform-wide AI failure.	3	4	Competitive Risks
R22	Class-action lawsuit and #DeleteShopify campaign trending globally.	3	4	Reputational
R23	Zero-day exploit in Vantage Discovery LLM endpoint exposes all merchant data.	7	4	Technical
R24	Simultaneous GDPR, PIPEDA, and EU AI Act violations trigger maximum penalties.	3	4	Legal / Compliance

Figure 1. Risk Heat Map — Distribution by Likelihood and Impact

Total risk score						
Impact\Likelihood		1	3	5	7	9
1		0	0	0	3	3
2		0	0	2	3	1
3		0	2	2	2	0
4		0	4	1	1	0
5		0	0	0	0	0

Impact\Likelihood	Low Impact	Moderate Impact	High Impact
Low Risk	Low Risk (<10)		
Moderate Risk		Moderate Risk (10-20)	
High Risk			High Risk (>20)

Figure 2. Risk Score Summary — Total Risks by Impact and Likelihood

		LIKELIHOOD				
		1	3	5	7	9
I M P A C T	5					
	4		R20, R21, R22, R24	R19	R23	
	3		R13, R18	R16, R17	R14, R15	
	2			R9, R12	R7, R8, R10	R11
	1				R3, R4, R5	R1, R2, R6

The Heat Map reveals a concentration of high-priority risks in the Technical and Competitive categories. Three risks exceed the High-Risk threshold of 20: R23, a zero-day exploit in the Vantage Discovery LLM endpoint (score 28), R14, a cybersecurity incident during integration resulting in partial merchant data exposure (score 21), and R15, Amazon and Google AI search dominance reducing Shopify Plus merchant retention (score 21). These three risks demand immediate management attention and align directly with the primary risks identified in the Risk Register. The majority of remaining risks fall within the Moderate Risk zone, including integration cost overruns, AI model underperformance in non-English markets, and regulatory inquiries from Canadian privacy authorities, all of which require continuous monitoring to prevent escalation into the high-priority zone.

6. Quantitative Risk Assessment

To move beyond the qualitative assessments developed in the previous sections, two complementary quantitative techniques were applied: the Indicators and Warnings (I&W) Analysis and the Monte Carlo Simulation. Together, these methodologies translate the risks identified in the SWOT and Risk Register into concrete financial exposures, expressed through probability distributions and measurable escalation thresholds.

The I&W Analysis establishes for each risk a primary monitoring indicator, two alert levels, Level 1 (Amber) for elevated risk conditions and Level 2 (Red) for conditions requiring immediate action, and financial impact estimates under optimistic, most likely, and pessimistic scenarios. The Monte Carlo Simulation complements this framework by executing 10,000 iterations per risk to generate full outcome distributions, expressed as the P10, P50, and P90 percentiles, and by calculating the probability that each risk breaches its escalation thresholds.

Table 5. Indicators and Warnings (I&W) Analysis — Escalation Thresholds by Risk

Element	Risk 1 — AI Search Competition	Risk 2 — Regulatory Non-Compliance	Risk 3 — New Merchant Opportunity
KRI	Monthly Merchant Churn Rate	High-Severity Compliance Findings per Quarter	Net New Merchant Acquisition Rate
Warning L1 (Amber)	Churn between 2%–4%	1 high-severity finding per quarter	Acquisition 5%–15% above baseline
L1 Breach Probability	100%	70.40%	45.10%
Estimated L1 Impact	~\$95M ARR loss	~\$85M fine	~\$508M ARR upside
Warning L2 (Red)	Churn >4% OR Shopify Plus churn >1.5%	≥2 findings per quarter OR formal investigation	Acquisition >15% above baseline
L2 Breach Probability	0.00%	0.00%	0.00%
Estimated L2 Impact	~\$380M ARR loss	~\$508M fine	~\$762M ARR upside
Inputs	Optimistic: \$25M / Most Likely: \$95M / Pessimistic: \$380M	Optimistic: \$5M / Most Likely: \$85M / Pessimistic: \$508M	Pessimistic: \$127M / Most Likely: \$508M / Optimistic: \$762M

Table 6. Monte Carlo Simulation Results — P10, P50, P90 Percentiles

Element	Risk 1 — AI Search Competition	Risk 2 — Regulatory Non-Compliance	Risk 3 — New Merchant Opportunity
P10 (Optimistic)	\$125.1M ARR loss	\$42.0M fine	\$325.2M ARR upside
P50 (Most Likely)	\$133.8M ARR loss	\$128.2M fine	\$491.3M ARR upside
P90 (Pessimistic)	\$142.9M ARR loss	\$262.4M fine	\$639.0M ARR upside
L1 Breach Probability	100%	70.40%	45.10%
L2 Breach Probability	0.00%	0.00%	0.00%
N Iterations	10,000	10,000	10,000

Table 7. Quantitative Risk Assessment — Monte Carlo Simulation & I&W Analysis

Risk #	Risk Name	The Risk of/That	Likelihood Score	Impact Score	Mitigation (with I&W Escalation Note)	Quantitative Probability (%)	Quantitative Impact (P50)	Source
R1	AI Search Competition (T1)	Loss of merchants to Amazon and Google due to superior AI-powered search capabilities on competing platforms	3 / 9	4 / 5	Phased AI search rollout; maintain legacy search fallback; deploy Shopify Plus retention program. Escalate at I&W L2: churn >4% monthly OR Shopify Plus churn >1.5% monthly.	100%	\$133.8M ARR loss	Monte Carlo P50; Recurly 2024; Shopify MRR \$212M × 12 = \$2.5B subscription ARR (Q1 2026)
R2	Regulatory Non-Compliance (T3)	Regulatory non-compliance with PIPEDA, the EU AI Act, and CCPA arising from deployment of LLM-based AI search technology	3 / 9	5 / 5	Pre-launch AI compliance audit (PIPEDA, EU AI Act, GDPR, CCPA); appoint AI Governance Officer; implement data minimization policy. Escalate at I&W L2: ≥2 high-severity findings/quarter OR any formal regulatory investigation initiated.	70.4%	\$128.2M fine (P50); \$508M tail risk	Monte Carlo P50; GDPR max fine = 4% × \$12.7B ARR = \$508M; Shopify Q1 2026 press release
R3	New Merchant Expansion (O1+O3)	Accelerated expansion into new merchant segments through contextual	3 / 9	4 / 5	Activate migration incentive campaign; scale onboarding capacity proactively; monitor weekly	45.1%	\$491.3M ARR upside	Monte Carlo P50; Shopify ARR 3–6% incremental = \$381M–\$762M; BetaKit

		AI search (positive risk)			during campaign periods. Escalate at I&W L2: net new merchant acquisition >15% above baseline (onboarding stress risk).			2025 (competitor parity 6–18 months)
--	--	---------------------------------	--	--	--	--	--	---

The results confirm that Risk 1, Amazon and Google AI search competition, represents the highest-frequency near-term threat, with a 100% probability of breaching the L1 threshold and a P50 ARR loss of \$133.8M. Risk 2, regulatory non-compliance, presents the largest tail exposure in the analysis: while its baseline probability is 70.4%, a pessimistic GDPR scenario could result in a fine of up to \$508M, equivalent to 4% of Shopify's annual revenue. Risk 3, new merchant segment expansion, is the most time-sensitive risk in the portfolio: with a P50 ARR upside of \$491.3M and an opportunity window of only 6 to 18 months before competitors achieve AI search parity, its immediate strategic activation is essential to maximize the value of the acquisition.

7. Risk Treatment & Response Plan

The Risk Treatment and Response Plan translates quantitative findings into concrete actions assigned to specific risk owners. For each identified risk, a response strategy was selected based on its likelihood of breach, financial exposure, and operational feasibility, in accordance with the COSO ERM 2017 framework.

Table 8. Risk Treatment Summary

Risk	Strategy	Primary Rationale	Key Action
R1 — AI Competition	Mitigation	Cannot avoid or transfer; 100% L1 breach demands active reduction.	Phased rollout + Plus retention program.
R2 — Regulatory	Mitigation + Transfer	Hybrid reduces probability and caps tail financial impact.	Pre-launch audit + liability insurance.
R3 — Market Expansion	Exploit + Enhance	Time-limited positive risk; passive acceptance forfeits \$491.3M P50.	Immediate migration campaign launch.

The mitigation strategy applied to Risk 1 directly responds to its 100% L1 breach probability. Since neither transfer nor avoidance is viable in this context, the phased rollout and Shopify Plus retention program represent the most effective controls to reduce both the likelihood and financial impact of merchant churn. Risk 2 adopts a hybrid mitigation and transfer approach: the pre-launch compliance audit and the appointment of an AI Governance Officer reduce the probability of non-compliance, while regulatory liability insurance establishes a financial ceiling below the \$508M tail scenario. Risk 3, as a positive risk, requires an exploit-and-enhance strategy; the 6- to 18-month competitive window makes the immediate activation of the merchant migration campaign the most critical action in the entire plan.

The monitoring and control framework, aligned with COSO ERM 2017, establishes owners, review frequencies, and next actions for each risk, ensuring that the early warning system remains active throughout the integration period.

Table 9. Risk Monitoring & Control Framework

Risk	Description	Owner	KRI	Review Frequency	Next Action
R1	Merchant Churn — AI Search Competition	CTO / Integration Team	Monthly Merchant Churn Rate (MRR delta)	Monthly	Activate pilot cohort monitoring
R2	Regulatory Non-Compliance — GDPR / EU AI Act / PIPEDA	CLO + DPO	High-severity regulatory inquiry filings per quarter	Quarterly	Establish AI Governance Committee
R3	New Merchant Market Window	CMO / Strategy	Net new merchant signup conversion rate	Monthly	Launch Shopify Plus AI migration campaign

Monitoring Principles (COSO ERM 2017)

Ongoing Evaluation: The KRI dashboard is reviewed at the defined frequency; any L2 breach triggers escalation to the risk owner within 48 hours.

Separate Evaluation: Quarterly independent review of all 24 risks by the risk management function, scores updated if market conditions change.

Reporting to Board: Semi-annual ERM summary to Shopify's board, heat map, Monte Carlo P50 updates, and mitigation progress vs. plan.

8. Conclusion

The analysis we conducted enabled us to evolve from a qualitative risk assessment to a quantified, actionable framework. The results not only identify what can go wrong, but also establish with precision how much it could cost and when Shopify must act. With that clarity, the acquisition of Vantage Discovery ceases to be a strategic bet and becomes an informed, manageable decision.

Merchant churn monitoring must remain our primary focus, as it will be the metric most likely to reveal how the market is shifting in response to these changes. A robust monitoring system will be essential to react proactively to significant movements.

Given the pessimistic scenario of \$508M in regulatory fines, equivalent to 4% of Shopify's \$12.7B ARR under GDPR (General Data Protection Regulation), regulatory non-compliance is recommended as a board-level strategic priority, embedding Privacy-by-Design at the architectural level as the only measure that addresses both the fine risk and the reputational consequences.

The +\$491.3M ARR (Annual Recurring Revenue) opportunity is available only over the next 6 to 18 months, before competitors reach the same technological level. This is the most urgent finding of the entire analysis, and the one most likely to be pushed aside while the team focuses on solving the day-to-day challenges of the integration.
